

ABSTRACT OF THE DISCLOSURE

A circuit board (8) having a storage means and electrodes capable of being connected to an external circuit is disposed on a side wall (5) of a container body 1 making up an ink cartridge on a side where an ink supply port (4) is formed. A positioning recessed portion (7) is formed which is open on the ink supply port (4) side and is adapted to engage a protruding portion (25) formed on a side of the recording apparatus.
